

## Why Have an Overheated **Kitchen in Summer?**

When the sultry days come and the coal range makes the kitchen almost unbearable and cooking a dreaded task, put out the range fire and try the newest method of cooking in hot weather-use a

What a contrast! The kitchen no longer is stifling hot, the work is now done with comfort, and the housewife is not worn out with the heat.

She saves her strength, keeps her health and is better able to enjoy the summer.

The New Perfection does everything that any other stove can do-all the family cooking, baking, washing and iron-ing. No smoke, no dust, no odor. Heat s applied directly and not wasted. A turn, and the flame is out.

The New Perfection stove has a Cabinet Top with shelf for keeping plates and food hot, drop shelves for the coffee pot or saucepans, and nickeled towel racks.

It has long turquoise-blue enamel The nickel linish, with the bright blue of the chimneys, makes the stove very attractive and invites cleanliness. Made with 1, 2 and 3 burners; the 2 and 3-burner stoves can be had with or without Cabinet.

To construct hollow re-enforced concrete fence posts a few modifications in addition to the core to be placed in the center of the post, writes C. A. Cook. The mold for an ordinary 4x4 inch post 7 feet long consists of a bottom, two sides and two end gates, all of which are held together by three Iron clamps placed over the top of the sides after they are put together. The sides are held to the bottom by small dowel pins inserted in holes in the bottom, so that the sides may be readily revolved, leaving the finished post lying on the base to harden. One end gate must have a two-inch hole in It through which the core may be with-

The wooden core is constructed of pieces and is 2 inches in diameter. Its full length should be 71/2 feet. A sawed into five strips, so that when

from 2 inches in diameter at the larg-7-foot post is 7 feet 2 inches long. This can be made by any tinsmith side. from good heavy galvanized Iron, and should be closed at the smaller end.

The mold is fastened together, and about one inch of concrete is placed on the bottom before the core is put in position. After being wrapped with paper the core should be passed through the hole in the lower end gate. The paper covering will permit the removal of the core in twenty to thirty minutes after the post is

nade. The galvanized iron core may be greased, but the paper is fully as effective.

The wooden core extends entirely hrough the post, and two end gates with two-inch holes in them are used with it. The metal core should be placed in the mold so that the smaller end is about two inches from the top of the post. After the core is in position the remainder of the concrete can be put in and the post set aside to harden until the core and molds can be removed.

Farm Work Horses,

If those who have horses in their charge on the farm would inaugurate more systematic course of feeding, utilizing the cheaper forms of feed. much expense of winter feeding could be saved, and better and healthier horses would be the result. Adopt, for instance, the plan of feeding the horses in the morning only a stomachful of the feed, a stomachful at noon, and only a stomachful at night. Such a course would give the horse's stomach a chance to digest the feed.

If a variety of feed is at hand, then feed one kind in the morning, another at noon and another at night. Regularity in feeding is important. If horses are watered frequently enough they will not drink too much at a time. Regular exercise in the open air is absolutely necessary to maintain permanent. For sale at all Drug a healthy condition. Spasmodic exercising alternating with periods of inactivity is dangerous and unprofitable The proper use of the means at comsmoking two or three months ago, mand on the farm will insure a good condition of the horses that will look well, he well and give excellent serv ice.-N. A. Clapp.

to you. Write today. the Chilean and Peruvian Andes, but extends in original type as far north as Colorado, where a wild form is occasional. Wild varieties of the potato exist in many parts of the world. but nowhere was it cultivated before the discovery of the western continent save in North and South America. It was taken to Europe, probably from "Uncle Ephr'm, how do you cook Peru to Spain, early in the sixteenth century. It seems Sir Francis Drake introduced it into England in 1586, though Sir Walter Raleigh is said to Housekeepers, attention: Try a package have done this a year before. It was of Russ blenching bine and you will use first regarded as a curlosity, and so no other. 10c at grocers. remained until the latter part of the eighteenth century, though the Royal Society of London in 1663 recommended it as a possible safeguard against famine among the Irish peasantry.

The Morgan Horse. Forty years ago the Morgans were the favorite road horses. This strain traces to a single ancestor, Justin Morgan, foaled in Vermont in 1793, his blood being largely thoroughbred. From him descended the Black Hawk. Bashaw, Golddust, Ethan Allen, Ben Franklin, General Knox and Daniel Lambert families. The Morgan type is short of leg, thick and round barrel, intelligent and of great courage and endurance.

A New Insecticide.

Prof. C. P. Gillette, of the Colorado Appleultural College, his discovered a new insecticide for the codlin moth which has proved effective in destroying the worms, and probably will be found not so injurious to apple trees as other arsenical poisons. Sulphide of arsenic is the name of the new poison. It comes cheaper than the arsenles now in use.

Planting Potatoes.

A potato specialst gives this advice: Prefer clover sod manured. Plow about four inches deep, planting in every third furrow. Plant about last week in May. Don't plant when dew about 3,000,000 barrels shorter.

the potatoes. Run over the potato ground with a disk just when the polatoes are coming up, then harrow, Leave two eyes when cutting seed potatoes. Don't cut too long before planting. Use one pound paris green to 100 pounds plaster and as a rule do not go over the potatoes more than once.

A Three-Pen Poultry House. The cut shows a very useful poultry house for three pens of fowls. with yards arranged for the same number. The house is 30x30 feet and of the ordinary mold are necessary, the interior and yet it communicates with all three pens. The inside divisions are of wire netting, allowing the sunshine that enters at the side of the house to fall into the pens; but the house should be so located that three

sides may receive morning, noon and round piece of soft wood may be afternoon sun. The plan is followed, according to Orange Judd Farmer, for the central portion is withdrawn the dividing the yard outside as for dividnarrow sides and then the wider sides ing the space inside the house. This may be removed from the concrete gives a large amount of yard space,

Caring for Grapes.

Rules for grapes culture from the experiment station record, United States Department of Agriculture: The main points in grape culture

are summarized as follows: With a few exceptions grapes of the Lubrusca species, of which the Con- these, stirring until stiff, and pour cord may be taken as the type, are into buttered pans. Mark in squares most satisfactory for general when sufficiently cool.

A warm, rich, well drained soll is est for the grape.

Almost all vines should be planted it least eight feet apart. Strong one-year-old vines are most

desirable for planting. Thorough shallow cultivation is es-

The pruning of the first two years must be done with reference to the system under which the vine is to be horoughly established.

The best time for the principal in autumn, but pruning can be done utes in a moderate oven. Excellent. at any time during the winter when the vines are not frozen. Summer pruning consists of pinching lateral branches in order to encourage the development of the fruit and the bearing wood for the succeeding year.

The long arm, short spur system of tory for the inexperienced grower, but the renewal systems are highly and polish with a touch of blue pow recommended.

Grafting Wax.

In an iron pot melt over the fire 100 parts of the nnest asp nair, add 600 parts brown pitch, until, with stirring, it is fluid; then pour in 600 parts of melted yellow beeswax. The fire must not be too hot at this time. When it thick turpentine, stir it well and pour | er to another in the open air. into it 600 parts of refined tallow. Lift It from the fire, stir until you begin ing may be seared first and then placed to note that it is cooling, and then in the oven to finish cooking. drop in, stirring steadily, very carefully, because the mass will at once rise up, 250 to 500 parts of alcohol, according to the consistency you wish it to have

Removing a Small Stump. By fastening the chain to one of the large roots and bringing it across the

top of the stump, a leverage can be secured to take full advantage of the strength of the horses.

Soil Moisture. To produce any crop it requiras from 300 to 500 pounds of water to make a pound of dry matter. It is important that soils have a great deal of moisture, and that it is not lost by evaporation. Deep plowing makes soils hold more moisture and frequent cultivations prevent its loss by evapora-

Green Food for Chicks.

If you have your own gians feed as great a variety as you have. Cracked wheat, cracked Kaffir corn and cracked corn are all good, but something in place of meat should be given, either beef scraps or blood meal, also charcoal and grit.

The Floor of the Brooder. Some poultrymen use bran on the floors of the brooders, and it is a good thing, provided it is replenished every day. It is more apt to get foul than dry alfalfa leaves. There is just about

the other. The Honey Product.

part of the small flock's ration, and they are usually evenly balanced rations, is one of the reasons a small flock of hens does better than a large

How to Cook Asparagus.

Asparagus should be boiled gently in well saited water, standing if possible to save the heads. The shoots tied to will accommodate 100 fowls. The gether in one bunch should be put into hallway takes but little room out of the pot so that the water will reach about half-way up. When they have boiled some ten or fifteen minutes they should be laid on their side so that Served with white sauce or with noth the water covers all and finished. ing but butter if the full asparagus taste is to be brought out, this makes one of the real delicacles of the table

Rhubarh Ginger. Wash but do not peel the rhubarb. The pink skin gives it a pretty color Measure the rhubarh and allow as much augar as you have fruit. To four pounds sugar and rhubarb allow the juice of two lemons and the yellow rinds, cut thin, with an eighth of a pound of green ginger root cut in thin dices. Cook until thick as marma-

> When boiled custard is slightly over ooked it may be brought back to the right consistency if it be thoroughly

beaten with an egg beater. A baking powder box with a small hole in the bottom makes a sharp, quick chopper for use when warming over potatoes or vegetables.

The solled lace yoke of a dress need not generally be removed to be cleaned. A plan which usually restores its pristine freshness is to rub powdered starch Into the lace, let it lie some yours and then brush it out. The starch absorbs both grease and dust.

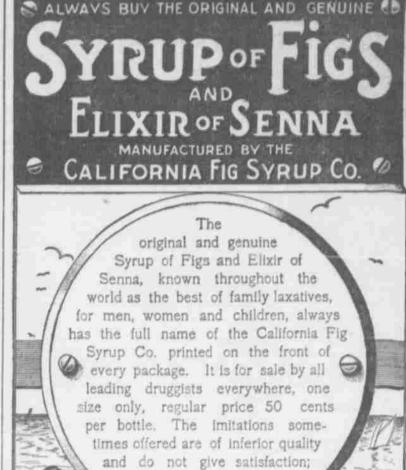

ART OF EATING AN APPLE.

it Is at Its Best if Munched When Sitting on a Fence.

The apple is so engagingly vagabondish a fruit. It is the black sheep of the fruit family, the tramp and roadster, just as the berries are the gamins and beggars. To eat an apple at a table is to treat it with all disregard of its charm and character, the New York Sun says; to approach it with knife and plate is to take the hopelessly wrong road to its good graces. It should be munched out of doors, preferably with others in one's pockets. An apple is at its best if eaten while sitting on a fence. It then admits you to its sweetest juices, and so attuned is it to the posture, so grateful for your understanding of its are not doing it. proper environment and for the spirit lamentably gnarled one, contrives at on an empty stomach, and I never have such a time to be not wholly unworthy an empty stomach.—Chicago Tribune.

of your attention. An apple always incites to theft, seducing the most carping moralist, and yet making theft seem right, seem the large same set, in the very moment of the seminary of the semi your downfall. Apples love wanderers, approve of homeless people and followers of the highway. They encourage them by growing near the road and doing their best to sustain and nourish. Even in a city apples hold velght against the enticing of rowdyish diversion of a ride on the top of a notor bus, air and apples being suffiient pleasure to justify the fall of any man. They argue so well, backed y their wholesome, lawless tastes, that one must needs agree, and providing the apple sets the tone they
